NEW - FLEX CONES for complete drive shafts

Dear customers ,

After the successful introduction of our new ENERGY & EVOLUTION PTO drive shafts during 2013, we are pleased to inform you about another NEW PRODUCT now available for all the drive shafts series:

The new BENZI FLEX-CONES designed by our Engineering Team allow the TOTAL COVERAGE of the Cardan joints up to 90° angulation , MAXIMUM safety for the operator and INCREASED DURABILITY of the drivelines by keeping dirt and dust particles away from the transmission organs. FLEX-CONES have been released in a material that allows extreme durability against UV-rays.

FLEX-CONES are available in various lengths and diameters , depending on the size of the driveline, and can be supplied with a fixing flange (to be ordered separately) to correctly ensure the guard onto the machine. Please contact our customer service for pricing and availability.
